Mission Statement

The Burning Tree Team offers you and your family the opportunity to create a life of excellence beyond sobriety by providing effective long term relapse prevention treatment. The heart of Burning Tree is our staff. We value the dedication and passion that the staff invests in your treatment with a supportive environment allowing for personal, professional and financial growth.

Client Population

Our clients have been to twenty-eight day treatment programs; some have been in and out of AA/NA for years. For this client population, TIME is the most critical factor for full rehabilitation.

Client Commitment

Continuing research in the field of substance abuse treatment has proven that recovery is dramatically enhanced through longer periods of time in treatment. Our length of stay is not predetermined; it varies based on personal commitment and progress of each individual. We also expect this commitment from family members and include them in our treatment planning with their loved ones.

TIME allows:

- * The mind and body a chance to heal.
- * The practice of new behavioral skills.
- * The replacement of unhealthy people, places and things with healthy ones.

- * Family relationships to begin a healing and discovery process.
- * Practice of spiritual principles in all of our affairs.
- * Formation of new habits and routines of consistency and responsibility.
- * Learning and assimilation of life skills necessary for sober living.
- * Willingness to become accountable for behaviors and actions.
- * Working *all* of the steps with a sponsor.

Dual Diagnosis

We take an integrated treatment approach to dual diagnosis. Our team understands the concept of chemical dependency as a primary disease, yet also recognizes that untreated psychiatric disorders are a contributing factor to relapse. Burning Tree employs psychiatrists who are recognized experts in this field. They are highly skilled in diagnosis, medication and therapy appropriate for other disorders in the context of, and within recommendations for, chemical dependency. Specialized treatment plans are developed to assist with problematic areas. Clients are given individualized treatment and therapy to assist them in developing coping strategies and structure for daily living.

Admissions

Residents must be alcohol & drug free prior to admission. The admissions process consists of an initial phone interview by an admissions coordinator, clinical assessment with a program director, financial arrangements finalized and the admission date and time confirmed. The Burning Tree treatment team will make the determination which facility each individual client will attend.

Setting

Burning Tree has two locations, one in Elgin, Texas approximately 30 minutes east of Austin and another located in Kaufman County, approximately 45 minutes southeast of Dallas, Texas. Both facilities are licensed by the State of Texas. Although the physical locations of the facilities are different, the philosophy, clinical approach, quality of education and level of care are identical. Each location offers a unique sense of warmth and charm. These peaceful, rural settings are conducive to the process of healing the mind, body and spirit for those who suffer from alcoholism and/or drug addiction.
